

Cyber Incident Response Team (CIRT)

CIRT/CSIRT/CERT: Cyber Firefighters

- ✓ Usually Called On-Demand
- ✓ Supports SOC with Analysis
- ✓ Handles Critical Incidents
- ✓ Identifies Hidden Threats
- ✓ Performs Deep Forensics
- ✓ Recovers Breached Systems

If SOC expertise is not enough or the incident goes out of control, you urgently call the "firefighters" - CIRT, also called CSIRT or CERT. The members should have a broad knowledge of cyber threats and handle breaches without depending on tools like EDR or SIEM. A CIRT job is stressful and responsible, but also rewarding. Here are a few CIRT examples:

- [JPCERT](#): Japan's CERT handling nation-wide breaches
- [Mandiant](#): A private team responding to global cyber incidents
- [AWS CIRT](#): Investigates security incidents of AWS customers
