	Spike of Domain Discovery Commands	Medium	In Progress	✓ True Positive	E.Fleming (L2)	
Details:	Detects a spike of commands like whoami, net user, and Get-ADUser, often used during AD domain discovery. Unless the commands are confirmed to be a part of IT activity or legitimate scripts, the device is likely compromised and requires immediate containment. dir hostname whoami /priv net group "Domain Admins" /domain nltest /dclist:tryhackme.thm DMZ-MSEXCHANGE-2013 Windows Server 2012 R2 NT AUTHORITY\SYSTEM C:\Windows\System32\cmd.exe C:\Users\Public\revshell.exe C:\Windows\System32\inetsrv\w3wp.exe Starting at 19:56, a spike of commands from the terminal, such as whoami, and GetAD-user seems like someone is trying to discover the AD domain. The username is NT AUTHORITY\SYSTEM, the OS is Windows Server 2012 R2, and it's coming from the device DMZ-MSEXCHANGE-2013.					
	Email Marked as Phishing after Delivery	Medium	In Progress	✓ True Positive	E.Fleming (L2)	
Details:	The email was classified as phishing post-delivery after an automated analysis. If the email is spoofed or contains any suspicious links or files, it must be deeply investigated. Important Update: Microsoft Teams Pricing Increase 600% price increase; urgent notice; download the report; read the details; Microsoft Support<support@microsoft.com> Eddie Huffman, IT Manager<e.huffman@tryhackme.thm> SPF/Fail: DKIM/Fail:					
	Well done on handling the final alert! THM{looks_like_webshell_via_old_exchange} Claim your flag and use it in Task 4 / Question 3					
	Web Scanning of Corporate Resources	Low	In Progress	✓ True Positive	E.Fleming (L2)	
	Sensitive Document Share to External	Medium	In Progress	✓ True Positive	E.Fleming (L2)	
Details:	A Google Drive document stored inside an important folder was shared outside of the organisation to a personal email. This action is a violation of corporate policies and must be reported to the Compliance department. m.boslan@tryhackme.thm HR Department shadow18562@protonmail.thm Employee Records (Updated) spreadsheet HR Internal At 18:30 UTC, m.boslan@tryhackme.thm (Martin Boslan, HR lead), logged in to their Google Workspace from a trusted LPT-HR-0988 device, and a minute later attempted to download the whole HR folder on their laptop, but was blocked by our DLP solution. A minute later, Martin shared the 'Employee Records (Updated)' spreadsheet to an unidentified shadow18562@protonmail.thm Protonmail email. Although no events are followed, escalating the alert to communicate with Martin and report the incident to the Compliance team.					
	Fast Beaconing to Untrusted Domain	High	Closed	✗ False Positive	S.Todd (L1)	
Details:	The rule detects repeated connections to a single domain with a static period like every 30 or 60 seconds. The connections may indicate a presence of C2 on the system, beaconing to the malicious destination. connectivity-check.ubuntu.com 443 prd-nginx-gc8610 /usr/bin/NetworkManager 60.5 seconds 30 The Nginx web server prd-nginx-gc8610 uses Ubuntu 20.04 as its OS, and periodic connections to the official connectivity check domain coming from a trusted /usr/bin/NetworkManager are expected for the system
