

Report Format

Imagine yourself as an L2 analyst, a DFIR team member, or an IT professional who needs to understand the alert. What would you want to see in the report? We recommend you follow the **Five Ws** approach and include at least these items in the report:

ALERT REPORT CHECKLIST

✓ All 5Ws are included in the report

✓ Alert report is clear and precise

✓ Alert report forms a single timeline

✓ Evidence and indicators are attached

✓ Escalation reason to L2 is explained

Double-Extension File Creation

Status

Closed

Verdict

True Positive

Severity

High

Assignee

J.Adams (L2)

Comment

At 13:56 UTC, the user S.Conway (Susan Conway, HR Coordinator) accessed the phishing website freecatvideoshd[.]monster from their LPT-HR-009 Windows laptop. At 13:58 UTC, the user downloaded a file from there named cats2025.mp4.exe, likely mistaking it for a legitimate video.

VirusTotal reports confirm that the file is LummaStealer malware, aimed to exfiltrate sensitive data and establish a C2 channel. Further malware actions require deeper investigation, so escalating the alert to L2 and sharing the SIEM findings:

> <https://siem.tryhackme.thm/jXgqnU>

- **Who:** Which user logs in, runs the command, or downloads the file
- **What:** What exact action or event sequence was performed
- **When:** When exactly did the suspicious activity start and ended
- **Where:** Which device, IP, or website was involved in the alert
- **Why:** The most important W, the reasoning for your final verdict

Answer the questions below

According to the SOC dashboard (opens in new tab), which user email leaked the sensitive document?

m.boslan@tryhackme.thm
